1 Introduction

This appendix should be read in conjunction with Chapter 3. The alloy microstructures were examined after each exposure to investigate the resulting changes, if any. These analyses were carried out under the assumption that the sample cores were not influenced by the surrounding environments. Indeed, the microstructures examined after 100 and 1000h were obtained from specimens exposed to air whilst those investigated after 500h were from alloys tested in the gas mixture.

2 XRD of Virgin Alloys

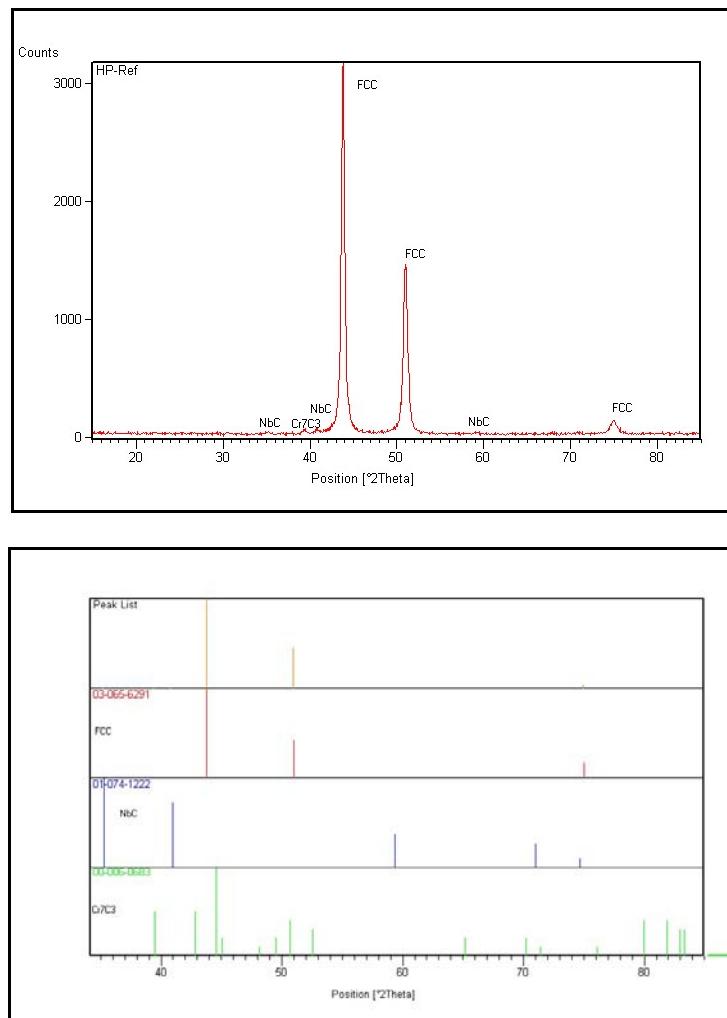

Figure 2.1 XRD pattern of alloy HP.

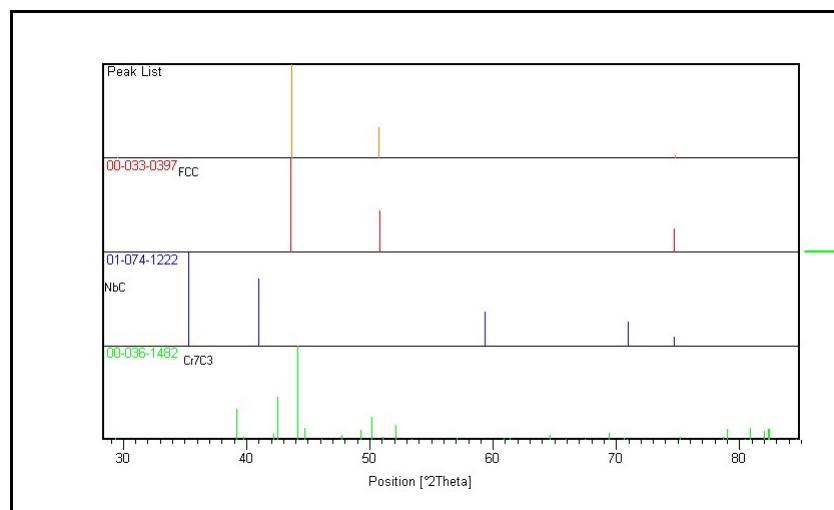

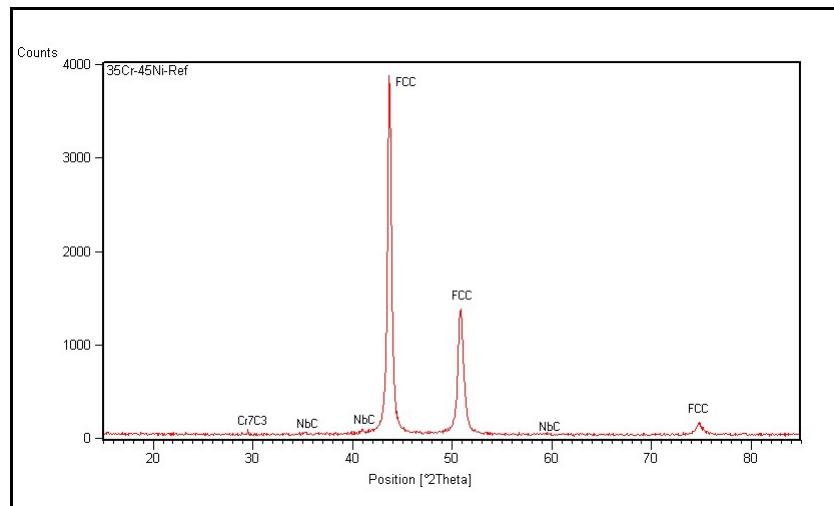

Figure 2.2 XRD pattern of alloy 35Cr-45Ni.

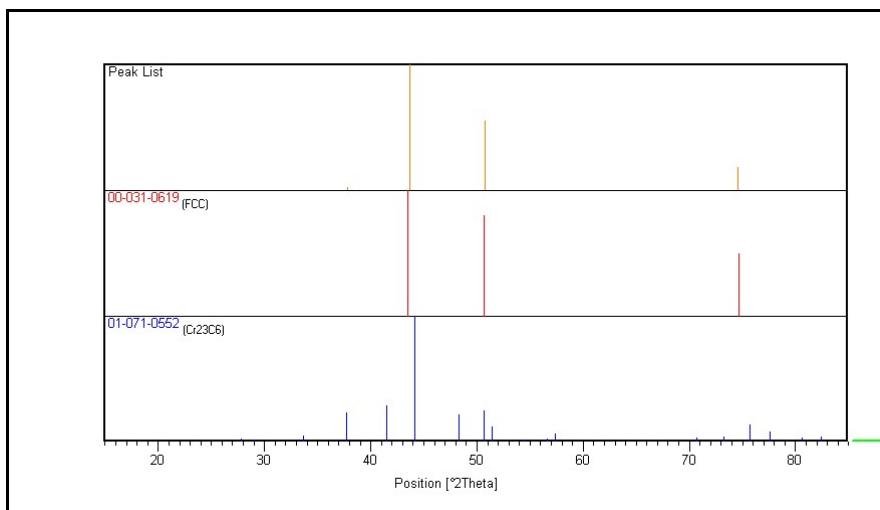

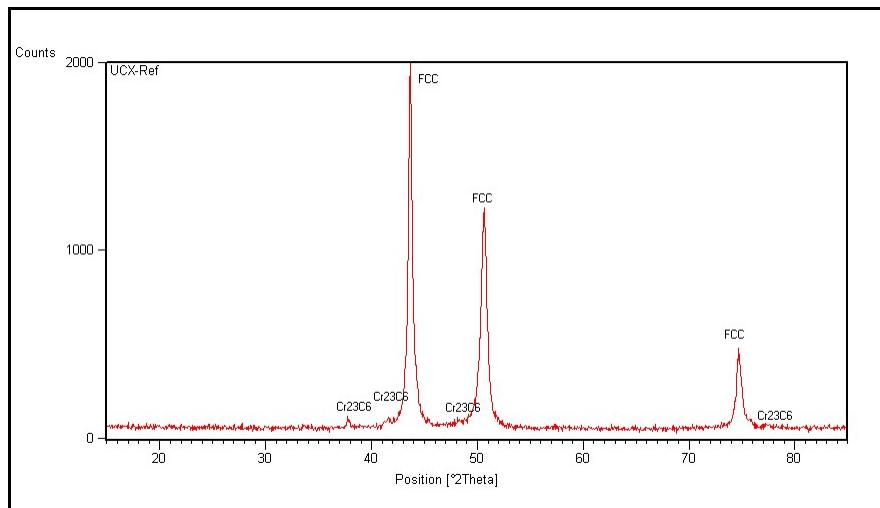

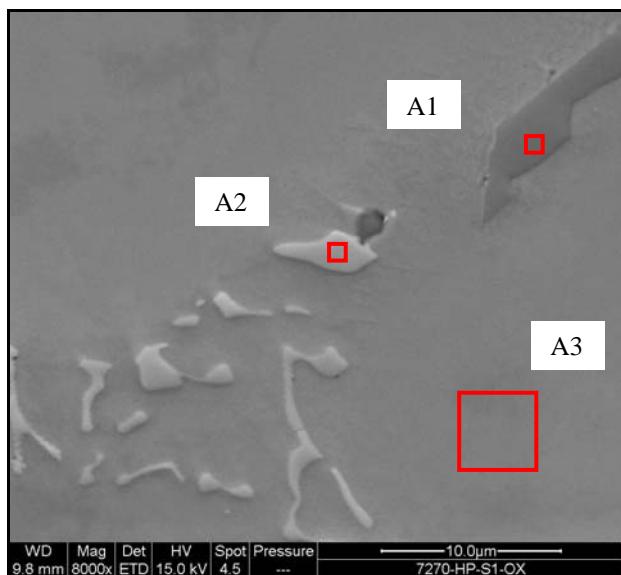

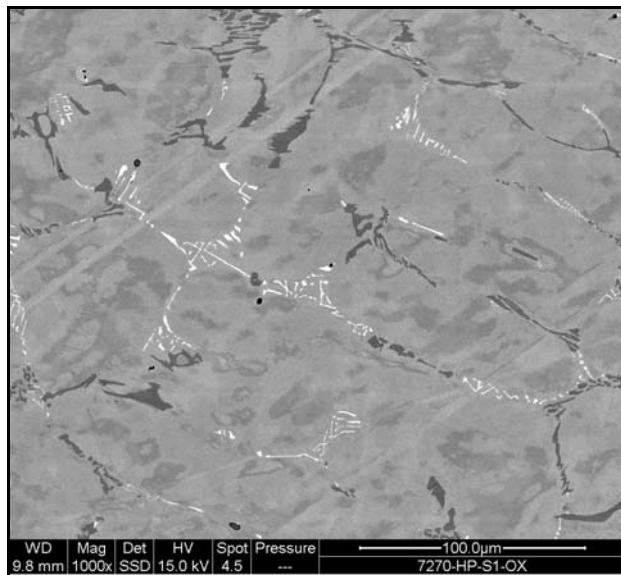

Figure 2.3 **XRD pattern of alloy UCX.**
