<i>Chapter 1</i> Making cities: economies of production and urbanization in Mediterranean Europe, 1000–500 BC	1
BELA DIMOVA, MARGARITA GLEBA & BEATRIZ MARÍN-AGUILERA	
Definitions of urbanism	2
Urbanism and textiles	2
Contributions to this volume	3
Cover illustration	4
Part I Eastern Mediterranean	
<i>Chapter 2</i> Argilos: the booming economy of a silent city	9
JACQUES PERREAULT & ZISIS BONIAS	
<i>Chapter 3</i> Regional economies and productions in the Thermaic Gulf area	21
DESPOINA TSIAFAKI	
Thermaic Gulf economies and production	22
Ancient Therme and its harbour	26
Conclusion	34
<i>Chapter 4</i> Production activities and consumption of textiles in Early Iron Age Eretria	39
KARL REBER	
Eretria in the Early Iron Age	39
Eretria's economic situation	41
The production and consumption of textiles	41
Conclusion	45
<i>Chapter 5</i> Productive economy and society at Zagora	47
LESLEY A. BEAUMONT	
<i>Chapter 6</i> Making Cretan cities: urbanization, demography and economies of production in the Early Iron Age and the Archaic period	57
ANTONIS KOTSONAS	
Urbanization	58
Demography	66
Economies of production	69
Conclusion	71
<i>Chapter 7</i> Production, urbanization, and the rise of Athens in the Archaic period	77
ROBIN OSBORNE	
<i>Chapter 8</i> Making Corinth, 800–500 BC: production and consumption in Archaic Corinth	89
IOULIA TZONOU	
Eighth century, to the end of the Geometric period and the transition into the Early Protocorinthian, 720 BC	95
Seventh century, the Protocorinthian and Transitional period into Early Corinthian, 720–620 BC	97
Sixth century, the Corinthian period, 620–500 BC	98
Conclusion	100

Part II	Central Mediterranean	
Chapter 9	Making cities in Veneto between the tenth and the sixth century BC	107
	GIOVANNA GAMBACURTA	
	Urbanization criteria	107
	Landscape and population	109
	Settlements	110
	Necropoleis	111
	Borders and shrines	112
	Inscriptions	114
	Myths	115
	Conclusion	116
Chapter 10	Attached versus independent craft production in the formation of the early city-state of Padova (northeastern Italy, first millennium BC)	123
	MASSIMO VIDALE & PAOLO MICHELINI	
	Materials and methods	124
	General patterns of industrial location	126
	Methodological issues	128
	The craft industries through time	130
	New craft locations: size and size variations through time	131
	Duration of urban craft workshops	132
	Ceramic, copper and iron processing sites: size versus duration of activities	133
	Discussion	134
	A historical reconstruction	138
	Onset of proto-currency and the issue of remuneration	141
	Conclusion	142
Chapter 11	Resource and ritual: manufacturing and production at Poggio Civitate	147
	ANTHONY TUCK	
Chapter 12	Perugia: the frontier city	161
	LETIZIA CECCARELLI & SIMON STODDART	
	Geology and culture	161
	History of research	163
	The emerging city from the rural landscape	165
	The topographical development of the city	166
	The city and its hinterland	168
	The rural settlements associated with the city	169
	Conclusion	172
Chapter 13	Tarquinia: themes of urbanization on the Civita and the Monterozzi Plateaus	177
	GIOVANNA BAGNASCO GIANNI, MATILDE MARZULLO & CLAUDIA PIAZZI	
	Approaching themes of urbanization at Tarquinia	177
	On the positioning of the protostoric site of Calvario and its road links	178
	The Calvario village on the Monterozzi Plateau and its economic activities during the eighth century BC	180
	The process of urbanization based on the evidence for the fortifications	185
	The limits of Tarquinia before its fortification, a theoretical approach	188
Chapter 14	Prolegomena to the material culture of Vulci during the Orientalizing period in the light of new discoveries	195
	SIMONA CAROSI & CARLO REGOLI	
	New data from Poggio Mengarelli Necropolis	195
	Conclusion	202

<i>Chapter 15</i>	Defining space, making the city: urbanism in Archaic Rome	205
	JEFFREY A. BECKER	
	Making civic space – the <i>Forum Romanum</i> and its environs	206
	Monumentality	210
	Peri-urban evidence	211
	Discussion	214
<i>Chapter 16</i>	Commodities, the instability of the gift, and the codification of cultural encounters in Archaic southern Etruria	219
	CORINNA RIVA	
	Agricultural surplus and a new funerary ideology	220
	Oversize vessels and fixing the gift	221
	Codification in the encounter	222
	Conclusion	226
<i>Chapter 17</i>	The Etruscan <i>pithos</i> revolution	231
	PHIL PERKINS	
	The <i>pithos</i> as artefact	232
	Making <i>pithoi</i>	236
	Using <i>pithoi</i>	240
	Socio-economic agency of <i>pithoi</i>	243
	<i>Pithoi</i> , economic development, and inequality	245
	<i>Pithoi</i> , economic growth and cities	248
	Conclusion	250
<i>Chapter 18</i>	Birth and transformation of a Messapian settlement from the Iron Age to the Classical period: Muro Leccese	259
	FRANCESCO MEO	
	The Iron Age village	259
	The Archaic and Classical settlement	266
	The Hellenistic period and the end of the town	276
<i>Chapter 19</i>	Indigenous urbanism in Iron Age western Sicily	281
	MICHAEL J. KOLB & WILLIAM M. BALCO	
	Settlement layout	282
	Demographic changes	286
	Production, consumption and exchange	288
	Ritual and cultic activity	290
	Conclusion	291
Part III	Western Mediterranean	
<i>Chapter 20</i>	Colonial production and urbanization in Iron Age to early Punic Sardinia (eighth–fifth century BC)	299
	ANDREA ROPPA & EMANUELE MADRIGALI	
	Colonial production and <i>amphora</i> distribution in Iron Age Sardinia	299
	Case studies: Nora and S’Urachi	301
	Discussion	305
	Colonial economies and urbanization	309
<i>Chapter 21</i>	Entanglements and the elusive transfer of technological know-how, 1000–700 BC: elite prerogatives and migratory swallows in the western Mediterranean	313
	ALBERT J. NIJBOER	
	Movement of peoples and goods	314
	Iron	316
	The alphabet	319
	Early monumental architecture	321
	Discussion and epilogue	323

<i>Chapter 22</i>	Making cities, producing textiles: the Late Hallstatt <i>Fürstensitze</i>	329
	MANUEL FERNÁNDEZ-GÖTZ & KARINA GRÖMER	
	Monumentality, production and consumption: the settlement evidence	330
	Textile use and display in funerary contexts	336
	Conclusion	340
<i>Chapter 23</i>	From household to cities: habitats and societies in southern France during the Early Iron Age	345
	ÉRIC GAILLEDRAIT	
	A question of time	346
	A contrasted image	347
	From one Mediterranean to another	348
	The evanescent settlement	349
	The emergence of the fortified group settlement	351
	The <i>oppida</i> of the sixth–fifth centuries BC	354
	The house in the context of the group settlement	358
	Craftspeople, crafts and workshops	361
	Conclusion	363
<i>Chapter 24</i>	Urbanization and early state formation: elite control over manufacture in Iberia (seventh to third century BC)	367
	JOAN SANMARTÍ, DAVID ASENSIO & RAFEL JORNET	
	The historical process	367
	Craft in its social context	369
	Conclusion	380
<i>Chapter 25</i>	Productive power during the Early Iron Age (c. 650–575 BC) at the Sant Jaume Complex (Alcanar, Catalonia, Spain)	385
	LAURA ÁLVAREZ, MARIONA ARNÓ, JORGE A. BOTERO, LAIA FONT, DAVID GARCIA I RUBERT, MARTA MATEU, MARGARITA RODÉS, MARIA TORTRAS, CARME SAORIN & ANA SERRANO	
	The Sant Jaume Complex	385
	Production in the Sant Jaume Complex chiefdom	388
	Conclusion	392
<i>Chapter 26</i>	Not all that glitters is gold: urbanism and craftspeople in non-class or non-state run societies	395
	MARISA RUIZ-GÁLVEZ	
	Craftspeople and workshops in Iberia	395
	Workshops in Iberia	398
	The Iberians as a House Society	400
	Conclusion	404
<i>Chapter 27</i>	Urbanization and social change in southeast Iberia during the Early Iron Age	409
	JAIME VIVES-FERRÁNDIZ SÁNCHEZ	
	Iberian urbanization: connectivity and dispersed territories	409
	Local economies into broader networks	411
	Agricultural intensification	412
	Urbanization, institutions and political authority	415
	Conclusion	420
<i>Chapter 28</i>	‘Building palaces in Spain’: rural economy and cities in post-Orientalizing Extremadura	425
	JAVIER JIMÉNEZ ÁVILA	
	Cancho Roano as a phenomenon	429
	The ‘post-Orientalizing’ world	432
	Post-Orientalizing economies	432
	Countryside and cities	438
	Final remarks	440
Part IV	Conclusion	
<i>Chapter 29</i>	Craft and the urban community: industriousness and socio-economic development	447
	CHRISTOPHER SMITH

Chapter 26

Not all that glitters is gold: urbanism and craftspeople in non-class or non-state run societies

Marisa Ruiz-Gálvez

One characteristic of the emergence of cities is craft specialization, with the appearance of workshops located in specific quarters. *Oppida* in temperate Europe are interpreted as indicating political centralization, industrial growth and occupational specialization (Woolf 1993; Fernández-Götz 2015; 2018). Several volumes have recently dealt with this topic (Álvarez *et al.* 2011; Sievers & Schönfelder 2012; Fernández-Götz & Krausse 2017). Among the most distinctive features of urbanism are: fortifications, a regular town plan with a network of streets, public buildings and industrial areas or artisanal quarters (cf. Gambacurta in this volume). Specific crafts areas can be seen in Heuneburg, Bourges or in the Celtiberian *oppidum* of Pintia (Gómez & Sanz 1993; Fernández-Götz 2015, 24).

We find also workshop districts in the Greek and Phoenician colonies in the central and western Mediterranean, such as Mazzola, the industrial district of Greek Pithekoussai in Italy (Ridgway 1997), or the Phoenician warehouse next to the harbour of Toscanos in Spain (Schubart 2002). Other examples are a district of metallurgical workshops in Morro de Mezquitilla and the industrial and commercial area related to the making of transport containers to the north of the colony in Cerro del Villar (Aubet & Delgado 2003).

Craftspeople and workshops in Iberia

In the case of the Late Iron Age Iberian Culture (c. sixth–second century BC), *oppida* are considered to be the materialization of social, political and economic changes, resulting in the dissolution of kinship relations in favour of a system of clientship and bonded labour (Ruiz & Molinos 1993; Ruiz 1998; Ruiz, Rísquez & Molinos 2011). The complexity of some fortifications and public buildings, the delicacy of the ritual and funerary sculpture and painted pottery, as well as the sophistication of weapons and gold and silver jewellery, suggest the existence of

craft specialization. Nevertheless, it is difficult to detect artisans in the archaeological record, to the extent that some authors suggest the existence of independent and itinerant craftspeople in the Iberian Culture (Blech & Ruano 1998; Quesada *et al.* 2000).

Greek and especially Phoenician and Punic epigraphy inform us – sometimes with their patronymic – of painters, sculptors, jewellers, carpenters, perfume makers, masons, blacksmiths, potters, etc. (Graells 2007a, 335ff). In our case study, we do not enjoy this advantage, as the Iberian language has not yet been deciphered, and we cannot fully understand the *graffiti* or painted or engraved inscriptions (de Hoz 2011). Therefore, the criterion used to assign a profession to the person buried in a certain tomb is, as a rule, the interpretation of some of the grave goods as specialized tools. As we know, grave goods do not necessarily represent the social identity of the buried person, and could also have been used to transmit an idealized message of power relations. Moreover, our own subjectivity plays a non-negligible role, sometimes biasing our interpretation (Parker-Pearson 1999). So, if we cannot easily assign gender through the grave goods, neither is it easy to assign occupation, as we shall see in the following examples of diverse chronology.

The first case concerns the richest cremation of the Orientalizing Tumulus A of Setefilla, Tomb 20, belonging to an adult/old man interpreted as a blacksmith (Aubet *et al.* 1996). The case is interesting because the grave, despite being rich, was peripherally located, which could be interpreted in connection with the marginality that blacksmiths suffer in certain societies (Budd & Taylor 1995). Nevertheless, when examining the grave goods of Tomb 20, nothing allows us to identify the cremation as belonging to a blacksmith, except for a clay object interpreted as a nozzle, an interpretation that should be questioned, due to the excessive width of its inner diameter (Fig. 26.1).

Figure 26.1. Tumulus 'A' at Setefilla. Left – grave goods (Scale 1:4) from Tomb 20, the so-called smith's tomb: a–d) pottery; e) the supposed nozzle; f) bronze belt hook; g–h) undetermined bronze items; i) iron knife handle with bronze rivets. Right: Tumulus A plan and peripheral location of Tomb 20 (adapted from Aubet 1975).

The second case comes from the rich Iberian necropolis of El Cigarralejo, dated between end of the fifth and the first centuries BC, although a great number of the tombs belong to the fourth century BC. A total of 187 out of 548 graves have been anthropologically identified (Santonja 1993). Most of them had been previously assigned according to their grave goods as male graves if there were weapons in them, or female if there were spindle whorls, loom weights or other items connected with textile production. In cases where there were weapons and textile tools in the same grave, the tomb was interpreted as a double, male/female cremation. However, the forensic analysis proved that, although all the analysed graves with weapons belonged to men, not all those with textile tools belonged to women. As Rafel (2007), who reviewed them emphasizes, the puzzled anthropologist who studied them described at least two of them – Tombs 122 and 158 – as belonging to 'an androgynous woman', since the person buried was a male without weapons but with textile tools.

Of no lesser interest is the lavish Tomb 100 of the Iberian Cabezo Lucero necropolis labelled as the 'Goldsmith's grave', because of the tools and goldsmith's matrices deposited in the western corner of the tomb, while a set of weapons was placed in its eastern corner (Fig. 26.2). Among the tools there were

two bronze instruments for making metal thread, a bronze and an iron anvil, a hammer, a gouge, an awl, a possible bronze scale pan, and a pair of iron tongs, together with more than 30 bronze matrices with a complex oriental iconography, probably alluding to a religious iconographic programme. The tomb is dated to the first half of the fourth century BC by the imports of Attic ceramics. Uroz (2006, 166), who published the 'goldsmith's set', assumed that they were the personal belongings of a goldsmith and that he had not enjoyed a privileged social position in his community, using Tomb 137 – considered outstanding within the necropolis – as the reference for high status burials. Surprisingly, Tombs 100 and 137 included the same set of weapons: an iron *soliferreum* or throwing spear, a shield, of which only the iron handle was preserved, an iron knife, an iron sword of the *falcata* type with its scabbard, and an iron spear. Tomb 137 had a ferrule as well.

The individuals in Tombs 100 and 137 were both cremated with some personal belongings: bronze tweezers, one annular fibula of the Hispanic type, two faience beads, and three bone beads in Tomb 100; and a bronze annular fibula of the Hispanic type, a bronze belt, and a bronze ring with three bezels in Tomb 137. A spindle whorl was deposited in each grave. Only the quality of the Attic imports differentiated the grave

goods. Tomb 100 contained an Attic red-figure low-foot cup and three black-slip bowls with impressed pattern, while Tomb 137 included an Attic red-figure bell krater with the scene of a symposium, fragments of an Attic black-slip bowl, of a *kylix* or *skyphos*, an Attic fish dish and an Iberian *amphora*. If the symposium set of Tomb 137 is exceptional, the matrices and goldsmith kit of tomb 100 are unique. Therefore, if Tomb 137 is classified as an elite tomb (Uroz & Uroz 2010), Tomb 100, dated a generation earlier, should also be. Graells (2007b), who accepts the interpretation of Tomb 100 as belonging to a goldsmith, stresses the high status granted to certain craftsmen. Yet, it could also be that the individual buried in Tomb 100 was not an artisan, but the person who controlled the wealth and the means of producing the gifts to the gods and the insignia used in ritual or political ceremonies. This latter interpretation was suggested for the Early Iron Age Knossos Tekke Tomb 2, traditionally attributed to a ninth-century BC oriental goldsmith. Kotsonas (2006, 159–61) reinterpreted it as belonging to a member of

the local elite, who enjoyed privileged access to precious resources and exercised a monopolistic control over certain objects considered gifts to the gods, or the material for producing them, such as gold bars. Considering that in some Linear B texts the *basileus* was described as the master of a guild of smiths, Kotsonas concluded that the people buried in that family tomb were most probably the elite patrons, who controlled and supplied gold to the Tekke workshop. The fact that matrices found in Cabezo Lucero Tomb 100 were in use between the fifth and mid-fourth centuries BC, suggests that they had been passed on at least over four or five generations before being deposited in the tomb. Similarly, the discovery of a complex multipurpose goldsmith's matrix, anvil, and a lead brick used to stamp metal plates in a ritual area of La Serreta de Alcoy *oppidum* (Grau *et al.* 2008) might give support to the idea that Cabezo Lucero Tomb 100 was the burial of an aristocratic person rather than a goldsmith.

How then should we interpret such burials as El Cigarralejo Tombs 145, 200 and 305 (Cuadrado

Figure 26.2. Sample of matrices and tools from the so-called goldsmith's graves at Cabezo Lucero: a–d) matrices with Orientalizing motives; e) bronze anvil; f) bronze gouge; g) bronze wire-drawing tool (adapted from Uroz 2006).

Figure 26.3. Iberian tombs with grave goods connected with weighing metal: a) El Cigarralejo Tomb 145; b) El Cigarralejo Tomb 305; c) Cabezo Lucero Tomb 2; d) El Cigarralejo Tomb 200; e–l) grave goods from Orley Tomb 2 (a–d adapted from Cuadrado 1987; e–l adapted from Lazaro et al. 1981).

1987), Cabezo Lucero 2 and 36 (Aranegui *et al.* 1993, 194ff and fig. 39), or Orley 2 (Lázaro *et al.* 1981, 32ff and fig. 14), all of which were provided with bronze scale pans, some of them also with weights? In some cases, as in the lavishly furnished Tomb 2 at Orley, dated to the first half of the fourth century BC, and Tomb 200 at el Cigarralejo dated to the late fifth-early fourth century BC, we could hypothesize that they belonged to members of the elite who controlled the means of production. The case of Tomb 200 at Cigarralejo deserves some additional comments. It is a conspicuous funerary building, isolated from other tombs and slightly overlapping Tomb 277, the other ‘princely’ tomb at El Cigarralejo (Lucas 2001–2002). Inside Tomb 200, a funerary urn and lavish grave goods, including weapons, horse gear, a set of bronze weights, 300 *astragali* – part of a game or, as Rísquez & García (2007, 162) suggest, counting tokens – a basket full of wheat and acorns, and many spinning

and weaving tools. As the cremated bones were not analysed, we could interpret with Cuadrado (1987), who conducted the excavation, that it was a double, male and female grave. Another possibility would be that the grave belonged to the head and ancestor of a group, living in the unexcavated *oppidum* to which the necropolis belonged, who controlled the *keimelion* or family riches and means of production, among them, land, metals and precious fabrics.

As for the other tombs mentioned above, the answer is not that easy. Are they merchants, goldsmiths, craftsmen specialized in the cupellation technique for extracting silver from lead? Or are they lesser members of an aristocratic group (Fig. 26.3)?

Workshops in Iberia

If we look at the spatial distribution of tools connected to specialized craftsmanship in the Iberian *oppida*, with

very minor exceptions, no industrial areas are distinguishable. Limited information has been published up to now about the spatial distribution of tools inside the houses of Puente Tablas (Ruiz & Molinos 2007), the *oppidum* upon which the *gentilician* organization model of the Iberian society is based. Nevertheless, we could at least say that textile activities took place at home and not in workshops (Risquez *et al.* 2020). Better known is the distribution of tools in domestic areas at the fourth century BC *oppidum* of La Bastida de les Alcusses, Valencia (Bonet & Vives-Ferrándiz 2011; Vives-Ferrándiz 2013 and in this volume). Domestic and working spaces were shared here. Even in small houses of less than 25 sq. m, food processing, weaving and metallurgical activities took place in the same space. There was no designated place for weaving, and not all the scale pans were found in the same rooms where cupellation or other metallurgical activities have been attested. Agricultural tools were not concentrated in a unique space, but scattered within the different clusters of houses, although not every cluster of houses had a plough. Thus, although differences of wealth between the different domestic units are visible, craft activities took place within the domestic sphere, sometimes sharing the same space rather than occupying specific areas.

Good spatial information comes also from other coeval sites of the Valencia region such as Puntal dels Llops (Bonet & Mata 2002) and Castellet de Bernabé (Guérin 1999). Puntal dels Llops is a small fortified enclave, subsidiary to the *oppidum* of Edeta, occupied from the end of the fifth century BC to the first quarter of the second century BC. It controlled communications to Edeta, but also an area rich in minerals. The spatial distribution of iron ingots and lead plates at the site indicates metallurgical activities on the spot. I have selected this site for several reasons: it has been fully excavated in its two occupational periods, the Late Bronze Age and the Late Iron Age; its life came to an end violently and many items were preserved *in situ*; and, finally, because as in the case of the *oppidum* of La Bastida de les Alcusses, it has been thoroughly studied and published. It consisted of a walled settlement with a tower, probably crowned with battlements on one end and a single gate opening in the north side. Seventeen rooms were defined, although not all of them could be labelled as dwellings. Only in a few rooms – numbers 2 and 14, and with some doubts, number 7 – there are hearths. In most of them, several different activities coexisted. Grinding, cooking, weaving and silver cupellation took place in room 2; several millstones in room 4 share the space with weaving tools, agricultural tools, and a complete set of chariot terret, horse bit,

bridle and spurs. Only room 1 apparently fulfilled a specialized function as a cultic space with a hearth, clay figurines, and a set of vessels for eating and drinking, or for libations and food offerings, although seven lead weights and two scale pans were also found there. Under the floor of room 1, a newborn child was buried. In view of the limited number of hearths and domestic ware in the different rooms of the site, Bonet and Mata (2002, 218–22), considered the inhabitants of Puntal dels Llops to be members of an extended family, whose head might have been living in room 4, where the horse equipment and the Attic imported pottery were found.

Another well preserved and documented site is Castellet de Bernabé, small, walled settlement in Valencia province (Guérin 1999), that was put to fire and abandoned in the late third century BC, with a second and brief reoccupation at around 200 BC. According to the published data, there is a slightly isolated house, bigger than the rest, which consisted of at least six rooms, each of which had a hearth and a loom. The big house was divided into a public space (room 22), with weapons and all the working tools found there, and a private space, consisting of five other rooms with domestic equipment (hearths, loom weights, grinding mills, etc.). Based on the spatial distribution of items in each room, Guérin (1999, 92) concluded that the big house could be understood as a household, hosting an extended family comprising the head of the house and his partner, with their maiden daughters because there were four looms in the house – one in each room – and his married son. The other dwellings housed people connected with the head of the household, either as clients, lesser members of the family, or workers. There were also two workshops (rooms 12 and 13), which were integrated into the household (Fig. 26.4).

In other areas, for example in northeastern Spain, Belarte (2010, 125) pointed out the coexistence of big and small houses and suggested that the bigger ones represented extended families. Many of these big houses are the result either of the union of two or more spaces, previously separated in an agglomerated pattern, or of the privatization of a previously public space, as happened in Ullastret, Alorda Park, Mas Castellar de Pontós, El Oral, El Puig de Alcoy, and many others. Similarly, Grau (2013, 63–5) has coined the term *plurifocal house* to describe houses joined around a connecting space, usually a courtyard, with several hearths and multifunctional rooms, such as the one described above in El Castellet de Bernabé, as aggregations of nuclear families, where several generations of a family were living under the same roof.

The Iberians as a House Society

At this point I need to go back to the *gentilician* model proposed by Ruiz (1998) to define the Iberian social structure. This model, taken from the Etruscan and Latial archaeology and expounded by Carandini (1997) and Torelli (1988), has been recently criticized by Riva (2010, 7), who questions the retrojection to the Italian Early Iron Age of an institution we know in Rome and Latium, but not in Etruria, through written texts from later periods. She suggests that it is not clear, to what extent the patronymic name could have meant anything more than the patrilineal descent of someone.

In a recent paper, Gonzalez Ruibal and I (2016) reviewed the features that characterize Levi Strauss' House Society model from an archaeological point of view, and applied it to the categorization of several Bronze and Iron Age Mediterranean societies, among them the Etruscans. I now propose to do the same for Iberian society. This is not new, as Vives-Ferrándiz (2013) recently made the same suggestion. What I

hope to do here is to complete and widen the scope of his model, proving that Iberian society fulfilled all the characteristics that Gonzalez and I described as typical of a House Society.

Levi-Strauss (1983, 174 & 1991, 434–6), inspired by the Medieval European and Japanese noble houses, defined the house as: 'a moral person, keeper of a domain composed simultaneously of material and immaterial possessions, which perpetuates itself by the transmission of its name, of its fortune and of its titles in a real or fictive line considered legitimate on the sole condition that this continuity can express itself in the language of kinship or alliance, and most often, both'.

Based on this, Gonzalez Ruibal and I (2016, 386) understand House Societies as: 'A sociopolitical organization based on corporate institutions enacting a bilateral system of endogamous alliances geared toward the perpetuation and enlargement of their physical and moral patrimony. These corporate institutions are best defined as 'Houses', because

they do not fit the concept of clan, lineage, moiety or other forms of kinship organization, whereas the house, as a building and a social institution, appears as the mechanism that brings together immaterial and material wealth’.

In our paper we describe a House Society from an archaeological point of view as follows:

- 1) House Societies are in between kin-based societies and the State, although this does not imply the existence of an evolutionary model. What matters is that this trait separates House Societies from gentilicial societies, which, although theoretically based on blood ties (Torelli 1996, 55–7), were arranged in social classes with neat labour division and specialization.
- 2) House Societies are hierarchical, because there are visible inequalities in size, wealth and power between houses, but they are heterarchical at the same time, because they compete among themselves for supremacy, wealth and status, and there is not a single and centralized instance of power.
- 3) House Societies emerge in complex agricultural systems, where there is a dearth of good soils, or where high densities of population are concentrated in the best agricultural tracts, control of which allows some families to gain power. In this case, the resulting strategy is the preservation, enlargement and enrichment of property, which is passed down from generation to generation, through a single heir of the male line, so as to avoid splitting the inheritance and to perpetuate the House name.
- 4) House Societies are not equivalent to chiefdoms, because in the latter it is labour control rather than land ownership that lies at the heart of these systems’ political economy. Nevertheless, some chiefdoms could evolve into House Societies.
- 5) House Societies are endogamous, cognate systems, where father patrilineage and mother patrilineage are equally important, as also women, through the dowry system, are capable of transmitting land or political patrimony or of inheriting it if there is no male heir. This explains cases of matrilocality or uxorilocality attested in the archaeological record, and the existence of lavish female graves, sometimes associated with power insignia usually connected to men, or, as in Etruria, the sculptures of the couple who were founders of a lineage. Of course, this need not mean that women exercise real power, but that they could transmit rights to the ruling office to their descendants.
- 6) Following Levy-Strauss’ idea of the head of the House as a moral person and as repository of material and immaterial values, Houses have shrines or are shrines in themselves and there is a strong investment in their decoration, emblems, or visual marks of their prominence. Spaces of material and immaterial wealth can be integrated in a single, multi-room building or aggregate domestic compounds or house clusters.
- 7) A strong concern with the past is also reflected in the continuous occupation of the same residence or of the same grounds, the existence of heirlooms, and of ancestor cult in the form of figurines, foundational offerings, or burials of newborn children and animals beneath the house floor.
- 8) Cemeteries are laid around the burial of the founder, or of the founder couple of the House, as at Lefkandi in Greece or Veii-Quattro Fontanili and other Early Iron Age Etruscan cemeteries. Family tombs are frequently laid under the residence floor, as in Ugarit and Megiddo in the Levant, perpetuating in that way the House through the dead and living generations sharing the same roof. In other cases, as in Etruria, the house of the dead mimics the house of the living.

Several of the above-mentioned social groups described as House Societies, were urban, many of them called small ‘Kingdoms’ or ‘City-States’ in the archaeological literature; they practiced writing, engaged in long-distance trade and collected taxes. Nevertheless, they did not have independent craftsmen or labour division, since specialists, including religious specialists, worked for and were members of the Houses, one of which was the King’s House. Therefore, they cannot be labelled as States (Schloen 2001; Riva 2010).

In a seminal paper, V. Gordon Childe (1950) defined ten characteristic features of ancient cities, among them bureaucracy and the existence of full-time specialists supported by and at the service of the palace. Subsequently, other authors assimilated the term ‘urban’ with ‘State’ and class societies (Adams 1966; Fox 1977, 24; Smith 2002, 4; Cowgill 2004, 526). Smith (2002; 2007) stressed the great variety and diversity of planning in early cities, while Fernández-Götz (2018, 124–5) demonstrated that cities emerged in Iron Age temperate Europe in non-state contexts. Likewise, Ur (2014) noted that models used to reconstruct the middle-late third-millennium BC Mesopotamian urban society based on written records obviated the local terminology connected to kinship and the importance of the household, and wrongly assumed a preconceived model of a bureaucratic, class-based, state society. Based on Schloen’s ‘Patrimonial model’ (Schloen 2001)

Figure 26.5. *Iberian funerary pillars crowned by heraldic beasts: a) Los Nietos necropolis; b) Coy necropolis; c) Los Capuchinos necropolis (adapted from Almagro 1983; 1990; Izquierdo 2000).*

and Levy-Strauss' (1983) 'House Society model', Ur (2014, 254–5) showed that Ur III texts lack a term for state and, although the word 'palace' does exist, its original meaning in Sumerian was 'The great House'. Nor was there a true bureaucracy, since officials gained their positions because of their kinship with the king. Ur (2014, 264) thus denied the appropriateness of the State model for Mesopotamia, because despite being urban, kinship continued to be the most important institution in this Bronze Age society.

I contend that Late Iron Age Iberian society, despite being urban, developing writing and – in some cases – even minting coins, is not a state or class society (contra Ruiz & Molinos 1993) but instead has all the features of a House Society.

Funerary towers with complex iconographic programmes, sculpted pillars or stone funerary structures crowned by heraldic animals such as bulls, lions, wolves, sphinxes or anthropomorphic sculptures mark and organize burial areas of aristocratic groups between the end of the sixth and the fifth centuries BC in south-east Iberia (Fig. 26.5). Oddly enough, some of these funerary monuments were wilfully and systematically destroyed at different moments between the mid-fifth and the fourth centuries BC, as can be seen at Cabezo Lucero (Uroz 2006), Elche, Corral del Saus, Cabecico del Tesoro, El Cigarralejo and many others (Izquierdo 2000). An outstanding case is Cerrillo Blanco in Andalusia, where a group of sculptures, dated to the mid-fifth century BC and representing hunting scenes (combats of men with beasts or men with men), fantastic creatures,

etc., was systematically destroyed and more than 1000 fragments thrown into a ditch next to a tumulus of the seventh century BC, housing 24 single inhumations in pits, and one polygonal chamber with a double, male/female inhumation, isolated from the rest (Ruiz & Molinos 2007). The connection between the area chosen to discard the sculpted pieces and the tumulus cannot be accidental. These recurrent iconoclastic cases are typical of the instability of heterarchical societies, where Houses compete for supremacy.

Fourth-century BC family tombs, such as those at Galera, Toya and Castellones de Ceal in Andalusia, emulate the layout and pattern of inner circulation of coeval great houses, according to analysis carried out by Sanchez (1998). Outstanding female burials such as the one of Baza Tomb 155, or Tomb 22B of Los Villares, in which the women were offered weapons as grave goods, or the representation of women – but never of men – seated on thrones, betray the existence of cognatic systems, through which female members of great Houses were transmitters of their patrilineage rights to the House patrimony and rule (Fig. 26.6) (Quesada 2010).

Emphasis in decoration and in visual emblems of the House's power is particularly evident in the towers, frequently crowned by crenellations, as found at Coll del Moro, La Quéjola, Puntal dels Llop and many others. Public buildings for sharing communal banquets among the members of the lineage are recorded in Ullastret, Burriac, Alorda Park, Puig de Alcoy, La Bastida building 5, etc. (Fig. 26.7) (Bonet & Vives-Ferrándiz 2013, 89).

Figure 26.6. *Enthroned Iberian ladies: a) Cerro de los Santos; b) Baza (adapted from Museo Arqueológico Nacional, Ministerio de Cultura, España).*

Figure 26.7. *a) Reconstruction of the wall with crenellations of la Bastida de les Alcusses (adapted from 'Arquitectura Virtual' in Bonet & Vives-Ferrándiz 2011). b) reconstruction of the gate of El Castellet de Banyoles oppidum (adapted from Gracia et al. 2000).*

Figure 26.8. a) Bronze horseman from La Bastida de Les Alcusses (adapted from Bonet & Vives-Ferrándiz 2011); b) reconstruction of the horseman as a sceptre (adapted from Lorrio & Almagro 2004)

Several households, resulting from the addition of new rooms and with different levels of wealth, have been detected in La Bastida de les Alcusses by Vives-Ferrandiz (2013, 105), who sees them as hosting five different lineages or Houses. In that same way, Puntal dels Llops and El Castellet de Bernabé could be understood as the seat of a lineage or House, with the head of the House occupying the bigger house and the lesser members of the lineage living in the small houses attached to the main house. We have already seen other cases of houses that increased their size by absorbing previously public spaces such as Alorda Park and Mas Castellar de Pontós, interpreted as hosting extended families (Belarte 2013, 83–5).

In fact, big and small *oppida* such as Puente Tablas (Jaén) (Ruiz & Molinos 2018, 63–4), Castellet de Banyoles (Tarragona), Alorda Park (Tarragona), Mas Castellar de Pontós (Gerona) (Belarte 2018), El Castellet de Bernabé (Guérin 1999), Puntal dels Llops (Bonet & Mata 2002), La Bastida de les Alcusses (Valencia) (Vives-Ferrandiz 2013), as well as El Puig and La Serreta de Alcoy (Alicante) (Grau 2013) could be seen as a ‘House of houses’, as Grau and Vives-Ferrándiz (2018, 92–3) define them.

Heirlooms are usual in House Societies, and are connected with the House’s concern with its own past and past deeds. We can interpret as an heirloom the small bronze figurine of a nude horseman wearing a crested helmet, recovered in room 218 at La Bastida. This piece was originally the top of a sceptre that had been cut at its lower end and transformed into an

ex-voto, perhaps representing a heroic ancestor, as Lorrio and Almagro (2004–2005) suggest. This could also be the case with the kit of matrices of Cabezo Lucero Tomb 100, which were in use for at least 100 years before being deposited in the tomb (Fig. 26.8).

Domestic ritual areas, which respond to the same concern with the ancestors, are also present in certain rooms of many Iberian *oppida* and are represented by clay figurines, *obeloi* or special ceramics used for libations. Even more importantly, Houses are considered living beings, which have to be fed. This is the reason for foundation offerings such as the one next to the western gate of La Bastida de Les Alcusses, or the frequency of newborns and animals being buried beneath the room floors. In many cases, these offerings accompanied every refurbishment of the house (Grau *et al.* 2015; cf. Vives-Ferrándiz Sánchez in this volume).

Conclusion

In a recent paper, Grau (2019, 15–18) gives some thoughts to cities and urban societies of the Late Iron Age Iberian Culture, stressing the absence in them of significant installations for processing agrarian resources or of craft workshops. He further points out the decentralized character of the urban fabric, the absence of religious or administrative centralized facilities, and their rare or modest monumentality. On the contrary, public works such as terracing, urban walling and fortifications denounce in his view the

persistence of a communal ethos pervading these urban societies, which he considers of heterarchical character.

Traditionally, the existence of full-time craftsmen as a social class is considered one characteristic of urban centres. Nonetheless, as the saying goes, not all that glitters is gold, so not all urban or proto-urban societies should be necessarily be interpreted as class societies. Concern with the past, as seen in the Iberian hero monuments at Porcuna (Negueruela 1990) and El Pajarillo (Molinos *et al.* 1998), the use of heraldic animals such as wolves, sphinxes, bulls or lions on top of the pillars to mark the funerary area of the family group, the competition among houses and the instability of power, betrayed by the systematic destruction of hero monuments and other family emblems such as the funerary pillar-stelae, are all compatible with the interpretation of the Iberian culture as a House Society system.

The fact that most of the settlements that I have reviewed lack specific areas for crafts suggests that most of the activities took place within the household. Of course, craft specialization must have existed: there were sculptors, painters, goldsmiths, etc. Yet, the fact that most of them are invisible to us in the archaeological record could be due either to methodological shortcomings or to the fact that they were part-time specialists, attached to the elite and producing on their patrons' demand. Therefore, the equation of urbanism with state and class societies does not always work. Quite the contrary: many urban processes arose within heterarchical and kin-based societies, which should better be called House Societies rather than States.

Acknowledgements

My gratitude goes to Dr. Ignacio Montero of the Spanish Council of research (CSIC) and a specialist in archaeometallurgy, for his generous advice and to Dr. Ignasi Grau (Universidad de Alicante) and Dr. Jaime Vives-Ferrándiz (Museo de Prehistoria de Valencia) for discussing with me relevant aspects of urbanism in the Iberian Culture.

Making cities

Large and complex settlements appeared across the north Mediterranean during the period 1000–500 BC, from the Aegean basin to Iberia, as well as north of the Alps. The region also became considerably more interconnected. Urban life and networks fostered new consumption practices, requiring different economic and social structures to sustain them. This book considers the emergence of cities in Mediterranean Europe, with a focus on the economy. What was distinctive about urban lifeways across the Mediterranean? How did different economic activities interact, and how did they transform power hierarchies? How was urbanism sustained by economic structures, social relations and mobility? The authors bring to the debate recently excavated sites and regions that may be unfamiliar to wider (especially Anglophone) scholarship, alongside fresh reappraisals of well-known cities. The variety of urban life, economy and local dynamics prompts us to reconsider ancient urbanism through a comparative perspective.

Editors:

Margarita Gleba is a Professor at the University of Padua and Honorary Senior Lecturer at University College London.

Beatriz Marín-Aguilera is a Renfrew Fellow at the McDonald Institute for Archaeological Research, University of Cambridge.

Bela Dimova is a A. G. Leventis Fellow in Hellenic Studies at the British School at Athens.

*Published by the McDonald Institute for Archaeological Research,
University of Cambridge, Downing Street, Cambridge, CB2 3ER, UK.*

The McDonald Institute for Archaeological Research exists to further research by Cambridge archaeologists and their collaborators into all aspects of the human past, across time and space. It supports archaeological fieldwork, archaeological science, material culture studies, and archaeological theory in an interdisciplinary framework. The Institute is committed to supporting new perspectives and ground-breaking research in archaeology and publishes peer-reviewed books of the highest quality across a range of subjects in the form of fieldwork monographs and thematic edited volumes.
